Outdoor temperature sensor

The PT 1000 outdoor temperature sensor is installed outside the building equipped with an air curtain and accurately measures the current outdoor temperature. The measured values are transmitted to the TCX control board of the air curtain.

Based on the set parameters, the TCX board automatically controls the appropriate fan speed and switches independently between summer and winter mode. This ensures efficient and demand-based operation of the air curtain.

Technical data	
Sensor	PT 1000
Housing dimensions	82 mm x 54.6 mm x 32.3 mm
Colour	Light grey
Protection class	IP 65
Temperature range	-30°C to 70°C
